

LA FAÛN

Mask

Micro-Trans Fiber Mask

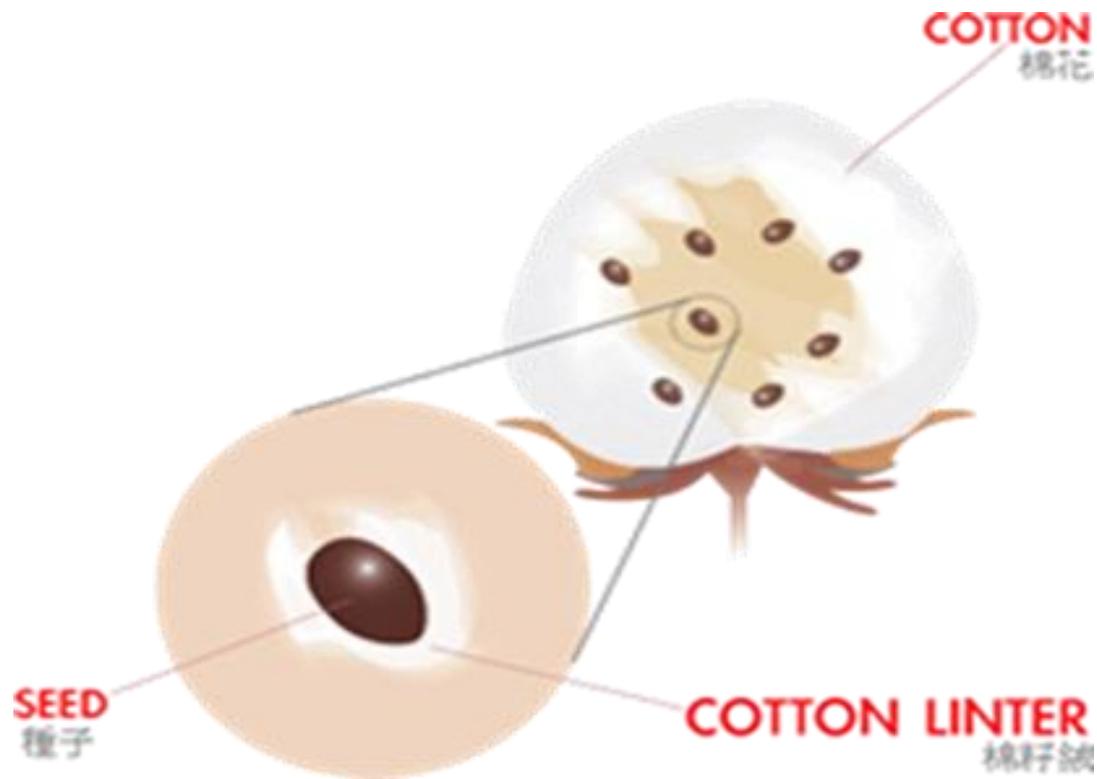

Micro-Trans Fiber is a soft, smooth, and gentle material that's perfect for applications ranging from medical gauzes to cosmetic pads to face masks to wipes for electronics and semiconductors.

ELECTRONIC COMPONENT PACKAGING/WIPES

- Micro-trans fiber is composed entirely of continuous cellulose filaments, markedly reducing the potential for lint and fallen-fibre formation and separation. The material is inherently composed of smooth, rounded filaments, a finely ordered micro-structure, and an additive-free composition, which results in a very low amount of surface abrasion when using it. Micro-trans fiber abrasion on a simulated skin surface is minimal even after repeated wiping, in contrast with the cumulative abrasion caused by other fabrics, such as normal cotton or rayon. As such, it is one of the smoothest natural fabrics available, perfect for skin treatments and other cosmetic uses, even on very sensitive skin.

Cotton Linter

As Micro-trans fiber is a natural fibre, it is completely free from any binding agents for freedom from binder elution, retention of inter-filament bonds, and ultra-low fibril release in use with a broad range of solvents.

Thanks to being natural, the material also benefits from the following properties:

- Micro-trans fiberl grade SB283 test results indicate it can absorb and hold about 13x its own weight in water.
- It generates CO and CO₂ during incineration, but virtually no harmful gases due to binder-free cellulose composition.
- It minimizes static charge formation, due to moisture-retention properties inherent to its fibres.
- It undergoes bio-degradation in soil and landfill disposal.
- It can withstand temperatures up to 260°C, free from the softening and decomposition characteristic of synthetic fabrics.

How to choose masks?

- Cotton facial masks offer an at-home spa treatment without the mess and hassle of more traditional face masks. Choose your mask with care to find the best match for you and enjoy amazing results with such a simple application.

Instructions

- Get a mask that is dermatologically recommended. Like many beauty products, fake or cheap versions are available on the market and these will typically contain lower-quality chemical ingredients that could have a negative effect on your skin.
- Look for masks that are made of eco cotton or manufactured from organic ingredients. Sometimes these can be a little more expensive, but masks made from natural fibers are less likely to irritate skin or provoke conditions and are friendly to the environment.

- Match the mask with your specific skin type. Whether it is dry or oily, ensure that you get a mask suited for your skin condition. Many cotton masks have a particular function in mind such as an anti-aging firming mask or a skin brightener. So choose a mask that does the job you want for your own skin type.
- Read the directions on the back of the pack to see how to apply it. Some cotton masks need you to leave them on for 30 or 40 minutes, so if you want a quick result, select a fast-acting mask like an ultra-absorbing formula that you can take off after just a couple of minutes.
- Check the expiration date on the packaging. Just like grocery shopping, find the mask with the latest date. If you keep your mask in the fridge or a cool, shaded area, it will actually last longer than at room temperature.

Non-woven Fiber Mask

Micro-trans fiber Mask

Mask Material analysis

	Non-woven Fiber	Micro-trans Fiber(Viceral)
Ingredient	<ul style="list-style-type: none"> • 85% synthetic fiber • 15% natural fiber 	<ul style="list-style-type: none"> • 100% natural fiber from Japan
Absorption	<ul style="list-style-type: none"> • Contains only 10-15% cotton • Not easy to fit on the face • Hard to absorb the serum in the mask 	<ul style="list-style-type: none"> • It can absorb more than 13 times the serum • Release the serum to skin once apply on the face • Penetrate serum instantly
Thickness	<ul style="list-style-type: none"> • Very thick • Hard to stay on the face • Serum gets dry out easily • Non-elasticity 	<ul style="list-style-type: none"> • Ultra-thin, only 0.2-0.3mm • Almost transparent when apply on the face • Perfectly fit on the face and hard to come off
Breathable	<ul style="list-style-type: none"> • Due to the thicker cotton mask, it is not breathable • Feel very heavy and sticky on the face 	<ul style="list-style-type: none"> • Elegantly fit on the face • No heavy, uncomfortable feeling • Deliver serum into every inch of the skin
Suitable skin type	<ul style="list-style-type: none"> • Not natural material, easy to get irritate • Not recommended for sensitive skin 	<ul style="list-style-type: none"> • Suitable for every skin type • Specially design for sensitive skin

How to use Micro-trans fiber mask after Medical Beauty Treatment?

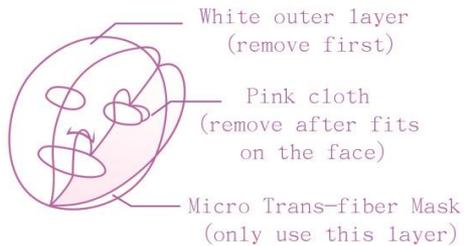

Skin tends to get very sensitive after medical beauty treatment, so it is important to offer intense hydration to soothe and calm the redness of the skin.

- ◆ Specially designed for after treatment skin.
- ◆ With high concentrate Hyaluronic Acid, Algae Extract, Aloe Vera Extract, Palmitoyl Tripeptide-5 to provide moisture into the skin
- ◆ With ultra-thin Micro-trans fiber, gives skin extra light and comfortable feeling. Skin feels instantly calm and soothe the redness of the skin.

Direction

During Treatment	Everyday use
<ul style="list-style-type: none">Remove makeup→cleanse→toning 5 minutes	<p>Carefully take out and unfold the Micro Trans-fiber mask. Peel off the white layer first and gently place it evenly on the cleaned face and even it out to cover the entire face. Peel the pink layer off. The Micro-Trans fiber would fit perfectly on the face. Use the mask 2-3 times a week, 10-15 minutes each. For better result, massage the entire face after replace the mask.</p>
<ul style="list-style-type: none">Treatment 5 minutes	
<ul style="list-style-type: none">Apply serum/ampoule 5 minutes	
<ul style="list-style-type: none">Maximum Hydration-Infusing Mask 15 minutes	
<ul style="list-style-type: none">Massage + repair + sunblock 5 minutes	

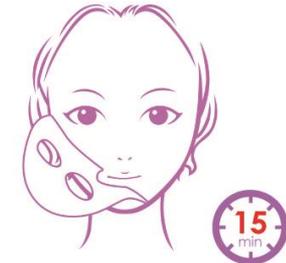

1. Carefully take out and unfold the Micro Trans-fiber Mask . Peel off the outer white layer first.

2. Gently place the middle layer evenly on the face (with the pink layer still attached together)

3. Peel off the pink layer off from the side of the mask. The mask would fit perfectly on the face.

4. Remove the mask after 10-15 minutes.

Use 2-3 times per week on a perfect cleansed face.

Followed by facial massage to get the best result

Asian Mask—the New Trend

- LA FAON Micro-trans Fiber facial masks are designed to be used as a simple and effective way to ensure personal care treatments are spread uniformly over the face for maximum, homogeneous coverage. The fabric, which transpires perfectly, allows for creams, gels, serums, and other products to be absorbed correctly by the skin without having environmental contaminants clinging to a freshly applied treatment.
- With just a 20 minute application using LA FAON Micro-trans fiber masks, personal care products become less intrusive, as the mask allows the simple application of the product and still permits the consumer to perform other activities, like watching a film, doing household chores, surfing on line. The mask can even be used on-the-go during long trips, a great aid for revitalizing tired travelers.
